

Quasar

CALCIUM HYPOCHLORITE TABLETS MADE IN ITALY

A special formula containing coformulants, additives, anti-scale and a polyquaternary biocide.

It is produced by a sodic process - 70% active chlorine - 7 g tablets

A medical and surgical device registered with the Ministry of Health no. 20121 and BPR (Biocides) registration in progress

Calcium Hypochlorite is the disinfectant most sold worldwide for treating swimming pool, drinking, waste and process water.

Calcium Hypochlorite is an excellent disinfectant with a strong oxidant ability. It is an economical disinfectant that has been used for many years to disinfect water.

Calcium Hypochlorite does not contain isocyanuric acid so it does not increase its level in swimming pool water after reacting. For swimming pools that are particularly exposed to the sun, we recommend the use of the ACTIV R stabilizing activator.

For indoor swimming pools, the consumption is the same as that of an organic chlorine, but the quality of the water is significantly better thanks to a higher Redox potential for the same free chlorine and pH values.

QUASAR LINE  **EUROPEAN CHEMICALS AGENCY**

Medical and surgical devices registered with the Health Ministry no. 20121 and BPR (Biocides) registration in progress

INSTRUCTIONS FOR USE

Initial treatment: use a specific diluter to add 10 to 15 grams of Quasar granules or tablets for every cubic metre of water to be treated. Adjust the pH to between 7.2 and 7.6.

Maintenance treatment: dose sufficient Quasar on a daily basis to maintain the free chlorine content in the pool between 0.7 and 1.5 ppm, to ensure that the water is properly disinfected.

PERFECT FOR

Quasar is perfect for every kind of swimming pool. Its special formula containing anti-sediment prevents the resting and precipitation of Calcium ions, so it can be used with excellent results in any kind of water. Designed specifically for perfect dilution in the dosage using DDS EVOLUTION and DDS 3000 measuring devices

ADDED VALUE

Used on a daily basis for daily maintenance and in impact treatments. It does not increase the Isocyanuric Acid in the swimming pool water. It has a high content of active Chlorine. Thanks to the presence of anti-scale, the use of Quasar does not require a balancing of the water in line with Langelier's index.
